BIPV PANEL FOR SOLAR FACADE SYSTEM

Solar panels can be installed on walls as a solar facade cladding solution on new facades or existing facades for renovation. It allows the energy efficiency of the building.

- Glass of your choice
- Different transparency rate
- Full, cut, bifacial solar cells

VENTILATED FACADE

The ventilated facade is a system of external dry coating, suitable for new and existing buildings.

- It bases its operation on the movement of air that triggers inside the air chamber.
- It is a natural convective motion, which depends on the temperature difference created between the interior and exterior of the cavity.
